

AutoElevate by CyberFOX

New Features

Just-in-Time Admin

Create a temporary just-in-time admin user and log in to Windows securely without knowing the password or having to share one.

AzureAD SSO

Single-Sign On convenience allows technicians to login to the AutoElevate Admin Portal using their AzureAD credentials.

Multi-Level Settings

Updated 'Settings' screen includes additional granular options such as customizing dialog messages, changing timer settings, displaying logos, and configuring agent security settings, down to the computer level rather than just at the global level.

Windows Event Logs

Event logging will output events and privileged user activities to each computers' Event Logs, making it easier to ingest with your SIEM tool. This enables you to monitor, detect, and respond to potential security threats and unauthorized actions.

Biometric Local Authentication

Granularly set how you want to add additional security on our mobile app. Require it for Just-in-Time Admin Login, one-time approvals, rule creation, technician mode access, etc.

Blocker

Based on a curated list of Living Off the Land (LOTL) attack vectors, help secure your environment and by creating custom blocking/allow rules designed to provide enhanced security with minimal disruption.
